EDUCATION AND TRAINING

2028

Bachelor of Engineering Computer Science

Dayananda Sagar Academy of
Technology & Management
Kanakapura Karnataka

2024

12th Grade

Deeksha CFL PU College
Bangaluru Karnataka

2022

10th Grade

St. Pauls English School
Bengaluru Karnataka

LANGUAGES

English: B1
Intermediate (B1)

SUMMARY

Computer Science student and full-stack developer who ships production-grade systems across React, Node.js, Django, and MySQL. Experienced in applied AI — RAG pipelines, multi-model LLM orchestration, and reinforcement learning — with a strong grounding in secure engineering (JWT/RBAC, self-hosted Linux infrastructure). Driven by end-to-end ownership: designing, building, and deploying real projects, not prototypes.

SKILLS

- **Languages:** Python, Java, TypeScript, C, C++, SQL
- **Frontend:** React 18, TypeScript, Tailwind CSS
- **Backend:** Node.js / Express, Django REST Framework, Spring Boot, REST APIs
- **Databases:** MySQL (Triggers, Stored Procedures, Schema Design)
- **AI / ML:** RAG, LLM Orchestration (Llama 3.3, Gemini)
- **Tools & Security:** Git & GitHub, Linux, JWT / RBAC

PROJECTS

MetroFlow — Live Transit & Logistics Dashboard

Full-stack real-time bus-tracking and navigation platform for Bengaluru.

- Built live bus tracking with real-time rerouting over Socket.IO, mapping real Kanakapura Road route geometry on interactive Leaflet maps.
- Implemented Nearest-Neighbor TSP route optimization with Haversine distance calculations and a cost/savings analytics view.
- Delivered role-based admin and user interfaces backed by a Spring Boot (Java) service layer.

Stack: React 18, TypeScript, Spring Boot, Socket.IO, Leaflet.js, Tailwind CSS

Suraksha — Civic Safety & Crime-Reporting Platform

Full-stack public-safety platform for reporting and analyzing crime/safety incidents with AI-driven triage and geospatial hotspot analytics.

- Engineered a five-tier LLM fallback chain (Llama 3.3 70B, Qwen, Cerebras, Gemini, offline engine) for resilient complaint classification that never hard-fails.
- Built Haversine-based geospatial clustering to surface crime hotspots on an interactive Leaflet dashboard.
- Secured the platform with JWT authentication, role-based access control, rate limiting, and anonymous reporting.

Stack: Django REST Framework, React 18, Leaflet.js, Chart.js, JWT
